1. The Ovidiu station is located on the Fetesti-Cernavoda railroad, which runs through the lake region of the Danube between the bridge over the Borcea River and the bridge over the Ezeru Mare Lake.
2. About 40 meters behind the Ovidiu railroad station there are eight stone platforms, approximately three meters high. They are shaped like truncated cones, with the upper diameters about eight or ten meters. The platforms are connected with each other by small wooden bridges. Antiaircraft guns of 75 mm caliber are installed on seven of the platforms. The eighth platform contains a range finder.
3. All guns are camouflaged by canvas and leaf-covered nets, and the range finder is concealed in multi-colored canvas.
4. West of the railroad there are two German type wooden barracks which house the crews of the guns. The soldiers are dressed in khaki uniforms which bear black epaulets. Near each gun there is an ammunition caisson. The distance between the platforms is 20 or 30 meters.
